Guillermo Campollo

Senior Backend / Platform Engineer (Python)

Distributed systems · Workflow orchestration · Fintech · LLM & RAG integrations

Guadalajara, Jalisco, Mexico · hello@ermocodes.com · https://www.linkedin.com/in/ermocodes · https://ermocodes.com
Remote from Mexico, UTC-6 (US time-zone overlap) · contractor or EOR, no visa sponsorship needed

SUMMARY

Backend engineer with 6+ years building Python APIs, distributed workflows and data pipelines for US companies, from startups to enterprise fintech. Built the workflow orchestrator for a Moody's platform, ran money-movement microservices at SoFi (Temporal, Kubernetes, on-call) and shipped OpenAI and RAG features at Docsum. Former Tech Lead.

> **Startups:** Docsum · Pronto Housing · NarrativeWave
> **Enterprise:** SoFi · Moody's · Anaplan
> **Note:** SoFi, Moody's and Anaplan were consulting engagements; SoFi and Moody's ran at the same time.

SKILLS

Languages: Python, SQL, TypeScript, JavaScript
Backend & APIs: FastAPI, Django (REST APIs), Flask, Pydantic, SQLAlchemy, microservices, REST
Workflows & async: Temporal, Celery (chords, groups), Redis, Airflow, AWS SQS, Kafka; idempotency, retries/back-off
Cloud & platform: AWS (Lambda, ECS, CloudFormation), Terraform, Kubernetes, Docker, CI/CD, autoscaling
Testing & observability: pytest, Datadog, Grafana, Sentry, OpenTelemetry
Data & AI: PostgreSQL (Supabase), OpenAI API, RAG search, PyTorch, pandas, NumPy
Integrations: DocuSign, Paragon, OpenAI, Jira
Ways of working: System design, on-call and incident response, code review, technical design docs, sprint planning

EXPERIENCE

A US consultancy ENTERPRISE CLIENTS — 2024 – 2026

Backend Engineer (Python)

Placed with US enterprise clients through a US consultancy; Moody's and SoFi ran at the same time.

Client: Moody's — Workflow orchestration service

Python, FastAPI, SQLAlchemy, Celery, Redis

- **Architect and lead developer** of the core orchestration microservice that coordinates 5+ downstream APIs and Elasticsearch: a REST API (FastAPI) that dispatches asynchronous jobs through Celery and Redis.
- **Built the workflow engine:** idempotent scheduling, retries with back-off and real-time job status, handling thousands of tasks per minute without message loss.
- **Centralised persistence** in connection-pooled SQLAlchemy models, keeping transactions consistent across distributed workflows.
- **Cut end-to-end latency ~30% and reduced cloud spend** with slim Alpine container images and autoscaling.

Client: SoFi — Money Movement team

Python, FastAPI, Temporal, Kubernetes, AWS

- **Extended and maintained Temporal workflows and Kubernetes microservices** on AWS behind SoFi's money-movement platform, keeping critical financial transaction workflows highly available.
- **Led the redesign and expansion** of key team applications, driving technical decisions from planning through deployment, improving scalability and performance.
- **On-call rotation:** triaged and resolved production incidents and bugs to minimise downtime and protect the customer experience.
- **Owned the team's application portfolio end to end,** from monitoring and upkeep to long-term improvements, with cross-functional teams delivering reliable payment services.

Docsum STARTUP
2023 – 2024

Full-Stack Engineer

Python, FastAPI, Pydantic, SQLAlchemy, Celery, Supabase (PostgreSQL, pgvector), Next.js, OpenAI API

- **Built LLM features on the OpenAI API** and set up the infrastructure for RAG (retrieval-augmented generation) search over the product database, with pgvector (Postgres) as the vector store.
- **Made the OpenAI features production-ready:** retries and timeouts, cost controls, and answer-quality checks.
- **Shipped third-party integrations** with DocuSign and Paragon.
- **Moved document processing from blocking requests to background Celery workers,** parallelised with Celery chords and groups.
- **Frontend:** built a document table view with advanced filtering and search in Next.js.

A US consultancy ENTERPRISE CLIENTS
2022 – 2023

Senior Backend Engineer (Python)

Client: Anaplan

Airflow, Flask, SQLAlchemy, Docker, Kubernetes

- **Enhanced and maintained data workflows** in Airflow with Flask and SQLAlchemy.
- **Deployed and ran scalable applications** on Docker and Kubernetes.

Pronto Housing STARTUP
2021 – 2022

Backend Engineer, promoted to Tech Lead

Python, Django, AWS Lambda, CloudFormation, Docker, React

- **Promoted to Tech Lead:** oversaw technical designs, documentation, code reviews and sprint planning for a team of 4.
- **Led backend development** on Django and AWS Lambda with a React frontend; managed infrastructure as code with CloudFormation and Docker.
- **Drove API and architecture improvements** that made the application more efficient and scalable.

NarrativeWave STARTUP
2020 – 2021

Backend Engineer (Python)

Python, Django, AWS Lambda, ECS, Celery

- **Maintained and expanded a Django REST API** and built services on AWS Lambda and ECS.
- **Streamlined task workflows with Celery,** improving task management and execution speed.

PROJECTS

Lead-engine (side project, 2026). Python pipeline that pulls job posts from several sources, removes duplicates and filters them by rules. 471 tests, 98% coverage. Built with AI coding agents under tests and review.

EDUCATION

B.Sc. Financial Engineering, ITESO, Guadalajara · 2016 – 2021

Data science and predictive modelling in Python (pandas, NumPy, PyTorch); built neural-network and decision-tree models to forecast financial markets. Final average 9.1/10.

LANGUAGES

Spanish (native) · English (fluent, C2)
